 PT New recombinant nucleic acid, useful for treating carcinomas, lymphomas,
 PT cancers, neoplasm, adenocarcinoma, or sarcomas.

XX
 PS Claim 1; Page 174; 2304pp; English.

XX
 SQ The invention relates to a novel recombinant nucleic acid comprising a
 CC nucleotide sequence selected from any of the 660 sequences fully defined
 CC in the specification. A polynucleotide of the invention has cytostatic
 CC activity, and may have a use in gene therapy, or in a vaccine. The
 CC recombinant nucleic acids and polypeptides are useful for treating
 CC carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and
 CC sarcomas. The sequences shown in ADB71221-ADB72172 represent mouse
 CC sequence tags, or genomic insertion sites, of carcinoma associated (CA)
 CC genes of the invention.

XX Polymorphic bovine DNA markers - used in genetic identification, gene
 PT mapping, and selective breeding.

XX
 PS Table 7; Page 244; 517pp; English.

XX The sequence is that of a bovine microsatellite sequence obtd. by
 CC screening a library of bovine MboI DNA fragments of between 250 and 500
 CC bp with an (AC)₁₅ and a (TC)₁₅ oligonucleotide probe. One out of 50
 CC clones cross-hybridised. Assuming independent distribution of
 CC microsatellites and MboI sites, the frequency of (T₆)_n > 9 microsatellites
 CC in the bovine genome is estimated at >100, 000. The sequence information
 CC for ca. 230 such bovine microsatellites is summarised in the
 CC specification and indexed herein (see below). The sequences upstream and
 CC downstream of the microsatellite sequence were used to generate the
 CC required PCR primers for in vitro amplification of the corresp.
 CC microsatellite (using the program OPTIPRIM). The microsatellites may be
 CC used to identify individuals, for parentage testing, and in the genetic
 CC mapping of economic trait loci, or genes involved the determinism of
 CC economically important traits esp. in cattle, to allow selective
 CC breeding. See also AAQ33501-34437. (Updated on 25-MAR-2003 to correct PN

XX Detection and/or genetic analysis of hepatitis B virus - specifically
PT genotype, preCore mutations, vaccine escape mutations and RT gene
PT mutations selected by treatment with drugs.
XX
XX Claim 5; Page 29; 80pp; English.
XX
XX This sequence is a probe for a genotype specific target of hepatitis b
CC virus (HBV). This sequence can be used in the method of the invention for
CC detection and/or genetic analysis of hepatitis B virus (HBV) in a sample.
CC The method comprises: (a) optionally releasing, isolating or
CC concentrating polynucleic acids (I) in the sample, and amplifying the
CC relevant part of a suitable HBV gene in the sample with at least 1
CC suitable primer pair; (b) hybridising (I) with a combination of at least
CC 2 nucleotide probes, which are applied to known locations on a solid
CC support and hybridise specifically to mutant target sequences chosen from
CC the HBV RT pol gene region, HBV preCore region, HBsAg region and/or HBV
CC genotype specific target sequences, or their complements or U for T
CC homologues; (c) detecting the hybrids formed in step (b), and inferring
CC the HBV genotype and/or mutants present in the sample from the
CC differential hybridisation signal(s). The composition can be used to
CC diagnose and/or monitor HBV mutants and/or genotypes in a sample,
CC specifically genotype, preCore mutations, vaccine escape mutations and RT
CC gene mutations selected by treatment with drugs, e.g. lamivudine and
CC penciclovir. (Updated on 27-AUG-2003 to correct OS field.)

XX Isolating DNA containing intermediate tandem repeat sequences, useful in
 PT DNA profiling.

PS Claim 30; Page 22; 11pp; English.

CC This sequence is a PCR primer for a human DNA marker clone used in the
 CC method of the invention. The method is for isolating a fragment of DNA
 CC containing an intermediate tandem repeat (ITR) sequence using
 CC hybridization selection, and comprises: (a) providing several DNA
 CC fragments, at least one of which contains an ITR sequence, a region of
 CC the DNA fragment which contains at least one repeat unit consisting of a
 CC sequence of five, six or seven bases repeated in tandem at least two
 CC times; (b) providing a stationary support having at least one
 CC oligonucleotide associated with it, where the oligonucleotide includes a
 CC sequence of nucleotides which is complementary to a portion of the ITR
 CC sequence; and (c) combining the DNA fragments with the support under
 CC conditions where the DNA fragments including the DNA fragment containing
 CC the ITR sequence hybridize to the support. The method is particularly
 CC used to isolate DNA containing pentanucleotide tandem repeat sequences as
 CC well as to detect target ITR DNA sequences having a low incidence of
 CC stutter artifacts (no more than 2.4%). The method is useful in DNA
 CC profiling for linkage analysis, criminal justice, paternity testing and
 CC other forensic and medical uses. DNA typing is also useful for confirming
 CC the lineage of horses, dogs and other prize animals. The invention
 CC overcomes problems related to the use of microsatellite loci in DNA
 CC profiling. The method can detect polymorphisms with a low incidence of
 CC stutter artifacts, which has previously been a problem in interpreting
 CC allelic content of loci. The development of markers based on larger
 CC repeat units, enables easier separation of the fragments on
 CC electrophoretic gels. This allows the simultaneous analysis of more loci

XX Novel biallelic markers used to construct a high density disequilibrium
 PT map of the human genome.

PS Claim 8; Page 1461; 2745pp; English.

CC AAZ65654 to AAZ65978 represent human biallelic markers from the present
 CC invention, which contain a polymorphic base at position 24 of their
 CC nucleotide sequences. AAZ65979 to AAZ77440 represent amplification
 CC primers for the biallelic markers. The biallelic markers of the invention
 CC have a variety of uses: they can be used for high density mapping of the
 CC human genome, and in complex association studies and haplotyping studies
 CC which are useful in determining the genetic basis for disease states.
 CC Compositions and methods of the invention can also be useful for the
 CC identification of the targets for the development of pharmaceutical
 CC agents and diagnostic methods, as well as the characterisation of the
 CC differential efficacious responses to and side effects from
 CC pharmaceutical agents acting on a disease as well as other treatment.

XX Arraying genome clones.

XX Claim 4; Page 46; 528pp; Japanese.

The present invention describes a method of arraying genome clones. The method comprises: (a) clones of the genomic libraries contained in multiwell plates numbered for discrimination are mixed in each of the multiwell plates; (b) a primer designed based on the chromosome marker sequence is added to the mixture to carry out an amplification reaction; (c) a signal corresponding to the marker is detected from the resultant amplified product to specify the discrimination Nos. of the multiwell plates containing the clones having said marker sequence; (d) the order of the markers is changed so that the same discrimination Nos. succeed to the maximum in the specified discrimination Nos. to array the multiwell plates; (e) the clones in the multiwell plates of the specified discrimination Nos. are mixed respectively in each wells of longitudinal and lateral directions; (f) the mixed clones are cultured and the

CC resultant cultures are amplified by using the above primer; (g) signals are detected from the amplified products; (h) the clones in the multiwell plates are specified from the detected result; and (i) the clones are reconstituted as the positions on the chromosome and arrayed. The microarray is useful for gene analysis. ABL42957 to ABL45322 represent PCR primers for human chromosome 1p36-35 DNA, and ABL45323 to ABL45634 represent PCR primers for human chromosome 21q22.1, which are specifically claimed for use in the present invention

XX New nucleic acid sequences of the optineurin gene are useful to detect
PT polymorphisms particularly single nucleotide polymorphisms in the
PT optineurin promoter to diagnose, prognose and treat glaucoma and related
PT disorders.
XX Claim 11; SEQ ID NO 314; 159pp; English.
XX The invention relates to an isolated nucleic acid (M1) comprising at
CC least 20 but not more than 1500 consecutive nucleotides of the optineurin
CC promoter appearing as ADE13890. Also included are the optineurin promoter
CC operably linked to a heterologous nucleic acid, a nucleic acid capable of
CC detecting a single nucleotide polymorphism (SNP) in the optineurin
CC promoter, a host cell comprising the promoter operably linked to a
CC heterologous sequence, diagnosing or prognosing glaucoma in a sample
CC obtained from a cell or bodily fluid (comprising detecting a polymorphism
CC in a promoter region of the optineurin gene, associated with a glaucoma
CC phenotype), detecting a SNP sequence variation in a sample containing
CC DNA, detecting the presence of an optineurin promoter sequence variation
CC in a sample containing DNA, determining the presence or increased
CC susceptibility to glaucoma or to a progressive ocular hypertensive
CC disorder resulting in loss of visual field in a patient (or the severity
CC or progression of glaucoma in a patient, comprising providing
CC amplification reaction primers that direct amplification of a selected
CC nucleic acid region containing the variation within the optineurin
CC promoter and amplifying the DNA) and detecting a polymorphism (comprising
CC obtaining a sample containing human genomic DNA, providing a nucleic acid
CC capable of detecting a SNP located within an optineurin promoter, and
CC detecting the polymorphism). The invention is used to diagnose and
CC prognose glaucoma and also to treat glaucoma related disorders. The
CC present sequence is an optineurin promoter motif, repeat element or
CC putative regulatory region.

XX Determining a predisposition for or the occurrence of neurodegenerative
PT disease, e.g. Alzheimer's disease by detecting in a target nucleic acid
PT the presence or absence of an allelic variant of one or more polymorphic
PT regions.
XX Example 3; Page 288; 848pp; English.
XX The present invention relates to a method (M1) for determining a
CC predisposition for or the occurrence of neurodegenerative disease in a
CC subject. The method comprises detecting in a target nucleic acid obtained
CC from the subject the presence or absence of an allelic variant of one or
CC more polymorphic regions of one or more genes selected from uPA
CC (urokinase plasminogen activator), SNGC (gamma-synuclein), IDE (insulin-
CC degrading enzyme), KNSL1 (Kinesin-like protein 1), LIPA (lysosomal acid
CC lyase), and TNFRSF6 (Tumour Necrosis Factor Receptor-SF6), where the
CC presence of at least one of the allelic variant of one or more
CC polymorphic regions is indicative of a predisposition for or the
CC occurrence of neurodegenerative disease. The genes are all located on
CC chromosome 10. M1 is useful for determining a predisposition for or the
CC occurrence of, and for treating neurodegenerative disease, particularly
CC Alzheimer's disease. The present sequence is a PCR primer, which was used
CC in the method of the invention.

 PT Kit for diagnosing and treating T-cell associated diseases e.g.
 PT autoimmune, degenerative nervous system and infectious disease, comprises
 PT nucleic acid primers specifically priming and allowing amplification of a
 PT Vbeta gene.
 XX
 XX
 PS Disclosure; SEQ ID NO 983; 164pp; English.
 XX
 XX The invention relates to a kit for diagnosing and treating T-cell
 CC associated diseases which comprises a panel of nucleic acid primers
 CC specifically priming and allowing amplification of each Vbeta gene,
 CC VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant
 CC rejection and diagnosing and treating T-cell associated diseases
 CC including autoimmune diseases, degenerative nervous system diseases,
 CC graft versus host disease, hypersensitivity diseases, infectious diseases
 CC and neoplastic diseases. Autoimmune diseases include Addison's disease,
 CC atrophic gastritis. Degenerative nervous system diseases include multiple
 CC sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
 CC I hypersensitivities such as contact with allergens that lead to
 CC allergies, Type II hypersensitivities such as those present in
 CC Goodpasture's syndrome and Type IV hypersensitivities such as those
 CC manifested in leprosy. Infectious diseases include viral infections
 CC caused by viruses such as HIV, fungal infections such as those caused by
 CC the yeast genus Candida, parasitic infections such as those caused by
 CC schistosomes, filaria and bacterial infections such as those caused by
 CC Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
 CC such as leukaemias, lymphomas and cancers such as cancer of the brain,
 CC breast. The present sequence represents a Vbeta gene repeat sequence.

XX Identifying a subject at risk of breast cancer by detecting the presence

PT of polymorphic variations in the ICAM, MAPK10, KIAA0861, NUMA1 or GALE

PT regions which are associated with breast cancer in a nucleic acid sample

PT from a subject.

XX Example 4; Page 84; 289pp; English.

XX The invention relates to a novel method for identifying a subject at risk

CC of breast cancer comprising detecting the presence or absence of one or

CC more polymorphic variations associated with breast cancer in a nucleic

CC acid sample from a subject. The method of the invention has cytostatic

CC applications and may be useful for identifying a subject at risk of

CC breast cancer, for early diagnosis, prevention and treatment of breast

CC cancer, possibly via gene therapy, as well as to analyse and predict a

CC response to a breast cancer treatment and in clinical drug trials. The

CC current sequence is that of an Extend primer (also described as probe) of

CC the invention which was used to genotype human intercellular adhesion

CC molecule ICAM-1/ICAM-4/ICAM-5 gDNA. ICAM-1 (human rhinovirus receptor;BB2

CC ;CD54;cell surface glycoprotein P3.58) has been mapped to chromosomal

CC position 19p13.3-p13.2. ICAM-4 (Landsteiner-Wiener blood group;LW) has

CC been mapped to chromosomal position 19p13.2-cen and ICAM-5

CC (telencephalin) has been mapped to chromosomal position 19p13.2.

XX Composition useful for treatment of autoimmune disease or condition e.g.

PT primary myxoedema, comprising agent which raises cAMP concentration in

PT monocyte cell, and granulocyte-macrophage colony stimulating factor or

PT its derivative.

XX Example 1; Page 59; 92pp; English.

XX The present invention describes a composition or a therapeutic system

CC comprising an agent which raises cAMP concentration in a monocyte cell,

CC and granulocyte-macrophage colony stimulating factor (GMCSF) or its

CC derivative and optionally a carrier, diluent or excipient. The

CC composition and agent have immunosuppressive, antianaemic, anabolic,

CC hypertensive, antidiabetic, nephrotropic, muscular, neuroprotective,

CC ophthalmological, antiinflammatory, antiulcer, gastrointestinal,

CC dermatological, CNS, antiarthritic, antirheumatic, thyromimetic,

CC antithyroid, vasotropic, antiallergic, antiasthmatic, virucide and

CC cytostatic activities, and can be used as granulysin expression and

CC interleukin-10 expression stimulators. They can be used in the

CC manufacture of a medicament for the treatment of an autoimmune disease or

CC a condition (e.g. primary myxoedema, thyrotoxicosis, pernicious anaemia,

CC autoimmune atrophic gastritis, Addison's disease, insulin dependent

CC diabetes mellitus, Goodpasture's syndrome, myasthenia gravis, sympathetic

CC ophthalmia, multiple sclerosis, autoimmune haemolytic anaemia, idiopathic

CC leucopenia, ulcerative colitis, dermatomyositis, scleroderma, mixed

CC connective tissue disease, rheumatoid arthritis, irritable bowel

CC syndrome, systemic lupus erythematosus, Hashimoto's disease, thyroiditis,

CC Behcet's disease, celiac disease/dermatitis herpetiformis, renal

CC vasculitis and demyelinating disease), allergic diseases such as allergic

CC asthma, for inducing tolerance to an antigen in a patient or treating an

CC aberrant or undesired immune or inflammatory response (e.g. deficiency in

CC interleukin-10 production) to the antigen in the patient, for treating

CC diseases associated with transplant rejection (e.g. graft versus host

CC disease or host versus graft disease), viral infection (e.g. herpes

CC simplex virus infection (such as cold sore) and human papillomas virus

CC infection (e.g. wart)) and tumours. The composition stimulates or

CC enhances granulysin expression in cells of the macrophage/monocyte

CC lineage, and particularly stimulates or enhances interleukin-10

CC expression in, and secretion from cells of, the macrophage/monocyte

CC lineage. The present sequence represents a probe for BCL2, which is used

CC in an example from the present invention.

 XX CC This invention relates to a novel activated mutant protein tyrosine
 CC kinases and associated methods for diagnosing cancer and screening for
 CC anti-cancer agents. Protein kinases are signalling molecules involved in
 CC tumorigenesis. Mutational analysis of the human tyrosine kinase gene
 CC family identified somatic alteration sin 1 in 5 colorectal cancers, with
 CC the majority of mutations occurring in the NTRK3, FES, GUCY2F and
 CC MCCK/MLK4 genes. Most were identified in the kinase domain. The invention
 CC may be useful for the production of compounds with a cytostatic activity
 CC acting as protein tyrosine kinase inhibitors or guanylate cyclase
 CC stimulators. The invention may be useful for developing methods for
 CC detecting mutations involved in cancer or screening for anti-cancer
 CC agents. The present sequence is that of a human-derived oligonucleotide
 CC which is related to the invention.

 XX PT Identifying a subject at risk of breast cancer by detecting the presence
 PT of polymorphic variations in the ICAM, MAPK10, KIAA0861, NUMA1 or GALE
 PT regions which are associated with breast cancer in a nucleic acid sample

PT from a subject.
 PS Example 4; Page 82; 289pp; English.
 CC The invention relates to a novel method for identifying a subject at risk
 CC of breast cancer comprising detecting the presence or absence of one or
 CC more polymorphic variations associated with breast cancer in a nucleic
 CC acid sample from a subject. The method of the invention has cytostatic
 CC applications and may be useful for identifying a subject at risk of
 CC breast cancer, for early diagnosis, prevention and treatment of breast
 CC cancer, possibly via gene therapy, as well as to analyse and predict a
 CC response to a breast cancer treatment and in clinical drug trials. The
 CC current sequence is that of an extend primer (also described as probe) of
 CC the invention which was used to genotype human intercellular adhesion
 CC molecule ICAM-1/ICAM-4/ICAM-5 gDNA. ICAM-1 (human rhinovirus receptor; BB2
 CC ; CD54; cell surface glycoprotein P3.58) has been mapped to chromosomal
 CC position 19p13.3-p13.2, ICAM-4 (Landeliner-Wiener blood group; LW) has
 CC been mapped to chromosomal position 19p13.2-cen and ICAM-5
 CC (telencephalin) has been mapped to chromosomal position 19p13.2.

 XX Universal array of oligonucleotides tags attached to a solid substrate
 PT along with locus-specific tagged oligonucleotides useful in genotyping
 PT using single base extension reactions.
 XX
 XX Example 7; Page 59; 70pp; English.
 PS
 XX The present invention relates to an oligonucleotide array comprising
 CC oligonucleotide tags fixed to a solid substrate. The oligonucleotide
 CC array is useful for genotyping a nucleic acid sample at one or more loci
 CC via single base extension (SBE) reactions. A pair of primers is used to

CC amplify a polymorphic locus in a sample e.g. a single nucleotide
 CC polymorphism (SNP). The present sequence is one of the primers used in
 CC the method of the present invention to amplify a polymorphic sample. The
 CC amplified nucleic acid product is then used as a template in a SBE
 CC reaction with an extension primer. The SBE reaction products are used to
 XX form the oligonucleotide array

 XX Ribozymes having modified bases and methods for producing them - for use
 PT in inhibiting disease related genes.
 XX
 PS Claim 2; Page 222; 407pp; English.
 XX
 CC The present sequence represents a preferred target sequence for an
 CC enzymatic nucleic acid (i.e. a ribozyme) which cleaves interleukin-5 (IL-
 CC 5) mRNA at the nucleotide base position indicated in the DE line. Regions
 CC of the mRNA that do not form secondary folding structures and that
 CC contain potential hammerhead and hairpin ribozyme cleavage sites were
 CC identified by computer analysis. Ribozymes directed against these mRNA
 CC sequences were designed and synthesised with modifications that improve
 CC their nuclease resistance. The ribozymes cleave the IL-5 target sequences
 CC and thereby inhibit IL-5 expression, making them useful for treating
 CC chronic asthma, e.g. by inhibiting the synthesis of IL-5 in lymphocytes
 CC and preventing the recruitment and activation of eosinophils. The
 CC ribozymes can also be used to treat eosinophilia (related to parasitic
 CC infection or with pulmonary infiltration) and L-tryptophan-associated
 CC eosinophilia-myalgia syndrome. (Updated on 25-MAR-2003 to correct PI
 CC field.)

 PT amplify polymorphic nucleotide repeat sequences, arranged in sets each
 PT with a characteristic fluorescence label, useful e.g. in detection of
 PT disease related genetic rearrangement.
 XX
 PS Disclosure; Fig 7K-2; 104pp; English.
 XX
 XX The method aims to provide a collection of highly reproducible
 CC microsatellite marker sequences (MMS) at approx. 10-50 cm intervals

CC throughout the human genome which can be detectably labelled. The MMS are
 CC polymorphic, simple sequence repeats and can be used in automated
 CC genotyping, esp. fluorescence-based. The primers correspond to the unique
 CC DNA sequence surrounding each marker, and PCR is used to detect each
 CC polymorphism. When the MMS show considerable polymorphism (ie. a
 CC difference in the number of repeats) between individuals, the markers can
 CC be particularly informative. The MMS can be ideal for linkage studies.
 CC Kits comprise at least 4 groups, of at least 3 sets, each comprising
 CC labelled primers for PCR amplification of the DNA. Group 11 primer pairs
 CC are shown in AAQ95841-82. The published size range of the D6S344 allele
 CC is 139-159 bp, and the degree of heterozygosity in the population is
 CC about 72%

 XX
 XX Antisense oligonucleotides useful for inhibiting the expression of the
 PT human RhoG gene.
 PT
 XX Example 15; Col 27; 24pp; English.
 PS
 XX AAZ25553 to AAZ25582 represent specifically claimed antisense
 CC oligonucleotides targeted to, and capable of inhibiting the expression of
 CC nucleic acids encoding human RhoG. RhoG is a member of the Rho subfamily
 CC of small GTPases the expression of which is associated with the induction
 CC of mitosis by mitogens. RhoG is thought to be required for entry into the
 CC DNA synthesis step of the cell cycle. It also effects the dynamic
 CC organisation of the actin cytoskeleton which regulates changes during

CC cell cycle progression (e.g. cell rounding and pinching off during
 CC mitosis) and with determining the density to which cells will proliferate
 CC (RhoG affects an actin-dependent signal transduction pathway mediating
 CC the level of contact inhibition through surface signals). Additionally,
 CC RhoG is associated with the development of cancers (RhoG participates in
 CC a signalling pathway involving ras-mediated transformation). Antisense
 CC compounds from the present invention may be used for inhibiting the
 CC expression of human RhoG in cells and tissues in vitro and may be used
 CC diagnostically to determine the role of RhoG in various biochemical
 CC pathways (e.g. its role in mitosis, the organisation of the actin
 CC cytoskeleton and in cancer development). AAZ25590 to AAZ25599 represent
 CC more human RhoG antisense oligonucleotides, but they do not inhibit RhoG
 CC as strongly as the specifically claimed sequences

XX Identifying compounds which modulate expression of nucleic acids, used to
 PT provide compounds having defined physical, chemical or bioactive
 PT properties, e.g. antisense activity.
 XX
 PS Example 21; Page 100; 264pp; English.

XX A method has been developed of defining a set of compounds that modulate
 CC the expression of a target nucleic acid (tNA) sequence via binding of the
 CC compounds with the tNA sequence. The method comprises generating a
 CC library of virtual compounds in silico according to defined criteria, and
 CC evaluating in silico the binding of the virtual compounds with the tNA
 CC according to defined criteria. Also described are: (1) a method of
 CC defining a set of oligonucleotides (ONS) that modulate the expression of
 CC a tNA sequence via binding of the ONS with the tNA sequence comprising

CC generating a library of virtual compounds in silico according to defined
 CC criteria, and evaluating in silico the binding of the virtual ONS with
 CC the tNA according to defined criteria; and (2) a method of defining a set
 CC of compounds that modulate the expression of a tNA sequence via binding
 CC of the compounds with the tNA. The methods can be used for the generation
 CC and identification of synthetic compounds having defined physical,
 CC chemical or bioactive properties. Information gathered from assays of
 CC such compounds is used to identify nucleic acid sequences that are
 CC tractable to a variety of nucleotide sequence-based technologies, e.g.
 CC antisense drug discovery and target validation. AAZ40852 to AAZ41220, and
 CC AA52701 to AA52706, represent sequences used in the exemplification of
 CC the present invention

 PT Haplotype analyses for indirect detection of glaucoma.
 XX
 PS Claim 18; Page 28; 41pp; English.

XX This sequence represents a PCR primer used in the method of the
 CC invention. The method is for detecting the presence of alleles for
 CC glaucoma comprising haplotype analysis of human chromosome 2 and 6
 CC respectively, where the haplotypes are associated with loci GLC1B and
 CC GLC6p25 respectively. The primers are used to amplify gene sequences to
 CC generate information necessary to compile haplotype profiles. The
 CC haplotype profiles can be used to detect presymptomatic and symptomatic
 CC glaucoma. They can also be used to localise, isolate and identify the
 CC GLC1B and GLC6p25 loci so that detection of individuals with glaucoma is
 CC enhanced. The haplotype analyses also provide means for identification
 CC and following of mutant alleles in pedigrees or populations.
 CC Identification of presymptomatic individuals using the methods allows
 CC intervention in the disease process and obviates the impact of inheriting
 CC a mutant allele causing disease, by medically disrupting the initiation

```

XX PT An antisense compound targeted to a nucleic acid molecule encoding a member of the human Rho family of small GTP binding proteins useful for treating e.g. cancer and ischemia.

XX PS Example 18; Page 81; 156pp; English.

XX CC This invention relates to an antisense compound targeted to a nucleic acid molecule encoding a member of the human Rho family of small GTP binding proteins, where the antisense compound inhibits the expression of the member of the human Rho family. The invention includes antisense oligonucleotides AAF94580 - AAF94637 which target a RhoA nucleotide sequence, AAF94645 - AAF94684 which target a RhoB nucleotide sequence, AAF94686 - AAF94725 which target a RhoC nucleotide sequence, AAF94727 - AAF94766 which target RhoG nucleotide sequence, AAF94769 - AAF94790 which target a Rac 1 nucleotide sequence and AAF94795 - AAF94809 which target cdc42 nucleotide sequence. The antisense compound is useful for treating hyperproliferative conditions, especially cancer, abnormal wound healing or clotting conditions and ischaemia/reperfusion or reoxygenation injury. The compound may also be used to diagnose the above conditions

XX PT New Isolated Mammalian Adhesion Protease Peptides (zdint2), which have homology to disintegrin-like family members, useful for preventing, diagnosing and treating fertility, muscular and neurogenic disorders.

XX PS Example 4; Col 77-78; 42pp; English.

XX CC PCR primers ABV72145-46 were used to map human zdint2 gene to chromosome 20. Zdint2 is a mammalian adhesion protease peptide (MAPP), and has homology to disintegrin-like family members (ADAMs, SVMPs and MDCs), referred to as disintegrin proteases (Dps). MAPPs have been found to be involved in anticoagulation, fertilization, muscle fusion, and neurogenesis. Zdint2 may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate MAPP expression. The proteins may be administered to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of MAPP by expressing inactive proteins or to

CC supplement the patients own production of MAPPS

 PT New gene (BNO1) mapping to chromosome 16q24.3, useful in gene therapy,
 PT e.g. for diagnosing or treating cancers (e.g. lymphoma),
 PT immune/inflammatory diseases (e.g. AIDS) or neurological disorders (e.g.
 PT Parkinson's disease).
 XX
 XX Example 8; Page 63; 85pp; English.
 XX
 CC The invention relates to the human and murine BNO1 proteins and nucleic
 CC acids encoding them. The BNO1 protein is a member of the PBXO class of F-
 CC box proteins, containing an F-box motif but no other known protein-
 CC interaction domains. Proteins which contain F-boxes are the substrate
 CC recognition components of SCF ubiquitin-E3 ligases, which are responsible
 CC for ubiquitinating proteins, thereby targeting them for degradation in
 CC the proteasome. In addition, BNO1 is able to interact with Skp1, an
 CC essential component of SCF ubiquitin-E3 ligases, suggesting that it plays
 CC a role in the ubiquitin-proteasome degradation system that is involved in
 CC the regulation of many proteins, particularly those involved in important
 CC cellular processes such as cell cycle regulation. The human BNO1 gene

CC maps to chromosome 16q24.3, and is expressed as two different isoforms.
 CC Isoform 1 consists of 539 amino acids and is encoded by an open reading
 CC frame (ORF) of 1617 bp, while the longer isoform 2 consists of 568 amino
 CC acids encoded by an ORF of 1704 bp. The mRNAs encoding the 2 human BNO1
 CC isoforms are the product of differential splicing: both comprise exons 1-
 CC 9, but the isoform 2 mRNA additionally comprises exon 2.5. Loss of
 CC heterozygosity (LOH) of the long arm of chromosome 16, in which the human
 CC BNO1 gene is situated, is implicated in breast and prostate cancer, and
 CC BNO1 expression is also downregulated in these cancers. BNO1 nucleic
 CC acids, proteins and compounds which modulate BNO1 activity or expression
 CC may be used for treating disorders associated with altered BNO1 activity
 CC or expression. Such disorders include cancers (e.g., breast, prostate,
 CC liver and ovarian cancers), immune/inflammatory diseases (e.g., AIDS
 CC (acquired immunodeficiency syndrome), asthma, Crohn's disease or multiple
 CC sclerosis) or neurological disorders (e.g., Parkinson's disease or
 CC Alzheimer's disease). BNO1 nucleic acids, proteins and antibodies may
 CC also be used to diagnose or prognose disorders associated with BNO1
 CC dysfunction, or a predisposition to these disorders. Additionally, BNO1
 CC nucleic acids and proteins, and transgenic animals comprising human BNO1
 CC nucleic acid sequences or in which BNO1 gene function has been knocked
 CC out are useful in screening potential drugs for treating BNO1-associated
 CC disorders, and the human BNO1 protein isoforms are particularly useful
 CC for identifying BNO1-specific protein substrates that are targeted for
 CC degradation by ubiquitination. Sequences ABQ94326-ABQ94349 represent
 CC human BNO1 gene-specific PCR primers used in SSCP (single-strand
 CC conformation polymorphism) analysis of tumours and cell lines for BNO1
 CC mutations in an exemplification of the invention

 XX
 CC The present invention relates to a method of determining a genotype
 CC associated with increased or decreased resistance to familial bipolar
 CC affective disorder. The method comprises determining the genotype with at
 CC least one marker of at least one chromosomal region linked to a locus
 CC associated with resistance to bipolar affective disorder, where the
 CC chromosomal regions are included of and localised between D4S402 and
 CC D4S424, D4S431 and D4S404, or D11S394 and D11S29. The invention also
 CC discloses a kit for determining a genotype associated with increased or
 CC decreased resistance to familial bipolar affective disorder, where the

CC kit comprises markers for two or more of the chromosomal regions cited.
 CC The method and kit are useful for determining a genotype associated with
 CC increased or decreased resistance to familial bipolar affective disorder
 CC in a family affected by bipolar affective disorder, for determining the
 CC contribution of these chromosomal regions to bipolar affective disorder
 CC in an affective family member, and for assessing an increased or
 CC decreased risk of developing bipolar illness for a tested individual from
 CC an affected family. ACAS8053-ACAS8292 represent primers used in the
 CC present invention

XX PT New single-stranded RNA molecule having a length from 14-50 nucleotides,
 XX PT useful for preventing or treating tumor, inflammatory, infectious, e.g.
 XX PT viral infections, degenerative and autoimmune diseases.

XX PS Example; Fig 17A; 73pp; English.

XX CC The invention relates to a novel single-stranded RNA molecule having a
 XX CC length from 14-50 nucleotides where at least 14-20 of the 5'-most
 XX CC nucleotides are substantially complementary to a target transcript. The
 XX CC RNA molecule of the invention demonstrates cytostatic, antiinflammatory,
 XX CC virucide and immunosuppressive activities and may be useful for
 XX CC inhibiting the expression of a target gene in vitro or in vivo,
 XX CC preferably for preventing or treating diseases associated with the
 XX CC overexpression of at least one target transcript. The diseases may be
 XX CC selected from tumor diseases, inflammatory diseases, infectious diseases
 XX CC such as viral infections, degenerative diseases and autoimmune diseases.
 XX CC Furthermore, the molecules of the invention may be utilised during gene
 XX CC therapy. The current sequence is that of the RT-PCR primer of the
 XX CC invention which was used to analyse human eukaryotic translation
 XX CC initiation factor 2C3 (eIF2C3) expression.

XX

XX Use of leukotriene synthesis inhibitor for manufacture of a medicament

PT for treatment for myocardial infarction or susceptibility to myocardial

PT infarction in individual.

XX

PS Disclosure; SEQ ID NO 22; 306pp; English.

XX

XX The present invention describes using a leukotriene synthesis inhibitor

CC (I) for the manufacture of a medicament for the treatment of myocardial

CC infarction or susceptibility to myocardial infarction in an individual.

CC Also described is a method (MI) for the treatment of acute coronary

CC syndrome (ACS) in an individual comprising administering (I). (I) has

CC antiatherosclerotic, cardiant and antianginal activities, and can be used

CC as a leukotriene biosynthesis inhibitor, and a leukotriene receptor

CC antagonist. (I) can be used for the manufacture of a medicament for the

CC treatment of myocardial infarction or susceptibility to myocardial

CC infarction in an individual who has at least one risk factor chosen from

CC an at-risk haplotype for myocardial infarction, an at-risk haplotype in

CC the 5-lipoxygenase activating protein (FLAP) gene, a polymorphism in a

CC FLAP nucleic acid and an at-risk polymorphism in the 5-lipoxygenase (5-

CC LO) gene promoter; in an individual who has at least one risk factor

CC chosen from diabetes, hypertension, hypercholesterolaemia, elevated

CC lpla), obesity, past or current smoker; in an individual having elevated

CC inflammatory marker chosen from C-reactive protein (CRP), serum amyloid

CC A, fibrinogen, leukotriene, leukotriene metabolite, interleukin-6, tissue

CC necrosis factor-alpha, soluble vascular cell adhesion molecule (sVCAM),

CC soluble intervascular adhesion molecule (sICAM), E-selectin, matrix

CC metalloprotease type-1, matrix metalloprotease type-2, matrix

CC metalloprotease type-3 and matrix metalloprotease type-9; in an

CC individual having increased low density lipoprotein (LDL) cholesterol

CC and/or decreased high density lipoprotein (HDL) cholesterol; in an

CC individual having increased leukotriene synthesis; in an individual

CC having previous myocardial infarction or acute coronary syndrome (ACS)

CC event, stable angina; or in an individual who has atherosclerosis or who

CC requires treatment to restore blood flow in arteries. (M1) is useful for

CC treating an individual suffering from acute coronary syndrome chosen from

CC unstable angina, non-ST-elevation myocardial infarction (NSTEMI) and ST-

CC elevation myocardial infarction (STEMI). The human FLAP gene is located

CC on chromosome 13, more specifically to 13q12. The present sequence

CC represents a microsatellite marker used in the exemplification of the

CC present invention.

XX

XX Identifying a subject at risk of melanoma, useful for treating melanoma,

PT comprises detecting the presence or absence of one or more polymorphic

PT variations associated with melanoma in a nucleic acid sample from a

PT subject.

XX

XX Example 3; Page 78; 176pp; English.

PS

XX The invention comprises a method for identifying a subject at risk of

CC melanoma. The invention involves detecting the presence or absence of one

CC or more polymorphic variations associated with melanoma in the neuropilin

CC 1 (NRP1) or mannose receptor C type 2 (MRC2) genes. The method of the

CC invention is useful for identifying subjects at risk and treating

CC melanoma. The present DNA sequence represents an extension PCR primer

CC that was used to detect single nucleotide polymorphisms within human

CC NRP1.

PT      Identifying a subject at risk of breast cancer by detecting the presence
PT      of polymorphic variations in the ICAM, MAPK10, KIAA0861, NUMA1 or GALE
PT      regions which are associated with breast cancer in a nucleic acid sample
PT      from a subject.
XX
PS      Example 4; Page 83; 289pp; English.
XX
CC      The invention relates to a novel method for identifying a subject at risk
CC      of breast cancer comprising detecting the presence or absence of one or
CC      more polymorphic variations associated with breast cancer in a nucleic
CC      acid sample from a subject. The method of the invention has cytostatic
CC      applications and may be useful for identifying a subject at risk of
CC      breast cancer, for early diagnosis, prevention and treatment of breast
CC      cancer, possibly via gene therapy, as well as to analyse and predict a
CC      response to a breast cancer treatment and in clinical drug trials. The
CC      current sequence is that of an Extend primer (also described as probe) of
CC      the invention which was used to genotype human intercellular adhesion
CC      molecule ICAM-1/ICAM-4/ICAM-5 gDNA. ICAM-1 (human rhinovirus receptor;BB2
CC      ;CD54;cell surface glycoprotein P3.58) has been mapped to chromosomal
CC      position 19p13.3-p13.2, ICAM-4 (Landsteiner-Wiener blood group;IW) has
CC      been mapped to chromosomal position 19p13.2-cen and ICAM-5
CC      (telencephalin) has been mapped to chromosomal position 19p13.2.

Listing first 778 summaries

Database : rni201.seq.*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

US-08-344-155C-4/c
Sequence 4, Application US/08344155C
Patent No. 5883082
GENERAL INFORMATION:
APPLICANT: Bennett and Stepkowski
TITLE OF INVENTION: Compositions and Methods for Preventing
TITLE OF INVENTION: and Treating Allograft Rejection
NUMBER OF SEQUENCES: 99
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodland Falls Corporate Park
STREET: 210 Lake Drive East, Suite 201
CITY: Cherry Hill
STATE: NJ
COUNTRY: USA
ZIP: 08002
COMPUTER READABLE FORM:
MEDIUM TYPE: DISKETTE, 3.5 INCH, 1.44 Mb STORAGE
COMPUTER: IBM PS/2
OPERATING SYSTEM: PC-DOS
SOFTWARE: WORDPERFECT 5.0
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/344,155C
FILING DATE: No. 5883082ember 23, 1994
CLASSIFICATION: 514
